

Design Property (glossary)

design property

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

A characteristic obtained during design through allocation of requirements, or estimate, analysis, study, calculation, simulation, etc. (Created for SEBoK)

Sources

This definition was developed for the SEBoK.

Discussion

A design property is associated to a system element, a physical interface, a physical architecture. If the designed element complies with a requirement, the design property should equal the requirement. Otherwise one has to identify the difference or non conformance which treatment could conclude to modify the requirement, or the design, or identify a deviation.

SEBoK v. 2.10, released 06 May 2024
