

Inter-Node Interaction (glossary)

inter-node interaction

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

The combination of communications, cooperation, and collaboration among the different nodes or elements of a system to act together to solve both local and strategic problems. Adapted from (Woods 2006)

According to Jackson and Ferris (2013) internode interaction is the primary principle of the integrity characteristic.

Discussion

This is essentially the same concept discussed by Woods (2006) in a resilience context except that the term used by Woods is "cross-scale interaction."
