

Non-Functional Requirements (glossary)

non-functional requirements

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

Quality attributes or characteristics that are desired in a system, that define how a system is supposed to be. (Created for SEBoK)

Source

This definition was developed for the SEBoK.

Discussion

Non-functional requirements contrast with functional requirements that define what the system must be able to do or perform. Typical non-functional requirements include availability, reliability, maintainability, safety, and security.
