

Sociotechnical System (glossary)

sociotechnical system

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

An engineered system which includes a combination of technical and human or natural elements. (Created for SEBoK)

Sources

This definition was developed for the SEBoK.

Discussion

The term "sociotechnical system" is used frequently in the literature, and almost all definitions state simply "a system incorporating humans and technology". The definition above has been created for the SEBoK alongside the definition of an "engineered system" - in the context of the SEBoK, sociotechnical systems are considered systems which are intentionally designed to incorporate human beings. See the Types of Systems topic for additional information. For a brief overview of some common characteristics of sociotechnical systems, please see (ComputingCases.org 2012), a resource designed to support education in ethical issues in computing.
