The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

*(1) Measures of attributes of a system element within the system to determine how well the system or system element is satisfying specified requirements. (Roedler and Jones 2005, 1-65)*

*(2) A product design assessment, which estimates, through engineering analysis and tests, the values of essential performance parameters of the current design as effected by risk handling actions. (BMP 2012)*

## Source
